

Intel Internships

Intel offers full-time, paid summer internships that give four-year college students hands-on opportunities to contribute ideas to challenging projects, network with Intel professionals and learn from real-world experiences. While class commitments understandably take precedence during fall and spring semesters, Intel recommends that summer interns not take part in daytime summer courses, since 10-12 weeks of challenging, full-time work makes additional class work difficult. Intel usually searches for and recruits summer interns between January and March, though applications are accepted year-round.
